Buzaao

Team Size: 4

Introduction

Buzaao is a national initiative for Fire Safety Industry for both commercial as well as residential space. Our mission is to digitize the fire safety industry with innovative tech enabled services. Our offering consist of 3 major components.

1. Business to Business Procurement Platform : Here businesses operating in fire safety industry will be served, there are many inefficiencies in how these businesses operate, we want to enable them to run their business on our platform and help them in all aspects from discovery to delivery.
2. Service Provider Solutions : Service providers in the fire safety industry are faced with very challenging circumstances of their day to day operations and execution of their installation and maintenance orders. We are building a solution that empowers them to run their order fulfilment process with great efficiency and modernize their operations at the same time.
3. Consumers : The consumers of our service providers have to be able to know the latest updates on their fire safety equipments and their maintainability so that they can ensure safety of their premises, as consumers we want to cater individuals, businesses, housing societies and governments

Project Highlights

- Buzaao Portal provides fire extinguisher services to the commercials as well as residential spaces
- Web Backend (Admin) will be able to manage B2B, Service Provider and Customers, price rate, view payment.
- APIs to make bridge between mobile application and backend.
- Laravel framework used to manage realtime location of driver and rider.

- Google APIs
- Authorize Payment Tool for payment.

Functionality

- Application is restricted and only can access after login.

Admin

- Admin have a feature to approve the user registration. Users only can access the application.
- Admin has a feature to expand the service in another city. Also can

manage the price along with multiple criteria.

- Admin can manage all master data of application.

- Admin can manage drivers, riders, and payment transactions.

Other Technologies used

- Android (Flutter)

Skills: Laravel 8

Duration: 0 Year(s) 6 Month(s)

The Go Ready

Team Size: 3

Introduction

GoReady Services, We are India's new emerging door to door service app with highly professional service experts. We provide more than 15 services at affordable price with guaranteed solution.

On Go Ready app you need to sign-up first with your basic information and then you can select a wide variety of services like Beauty services, Car wash, AC service, Geyser service and repair, RO Service and repair, CCTV, Astrology, Plumber, Appliance Repair, Physiotherapists at an affordable price. User has an option to pay using both online methods through app or Cash at the time of services.

Through this app user can also live track the service provider in some categories once a request has been made for that particular service. User can also connect with the service provider via phone regarding route and service-related concern during the course of request.

Once completed the task user will get and receipt post confirmation of the payment by the service provider. User can also rate the service provider according to the service.

Project Highlights

- User App will facilitate Customers to book a wide variety of services like Beauty services, Car wash, AC service, Geyser service and repair, RO Service and repair, CCTV, Astrology, Plumber, Appliance Repair, Physiotherapists at an affordable price. User has an option to pay using both online methods through app or Cash at the time of services.
- Service Provider can accept/cancel the request, receive payment and notification.
- Web Backend (Admin) will be able to manage Customers and Users, price rate, view payment, and Services.
- APIs to make bridge between mobile application and backend.
- Laravel framework used to manage realtime location of driver and rider.

3rd Party Components

Char Pair

Team Size: 6

Introduction

Char Pair will help you to get easy lift to your destination by suggesting matches of people nearby you, traveling to same destination or similar route, your travel will be more economic then traveling alone & more comfortable then traveling by public transport. You can give rest to your vehicle & join someone & become a fuel partner.

This will lead to reduce pollution by reducing carbon emission, optimize the fuel consumption & reducing traffic. Char Pair will provide Easy, Economic , Comfortable & Ecofriendly carpooling/bike pooling solution.

Project Highlights

- Search Lift:- Post your lift with schedule & we will notify matches as people driving to same route.
- Offer Lift:- Post your vacant seat with schedule & we will notify people looking for lift on same route.
- Taxi Pool:- Rather than going alone look for Cab/Taxi & split the cost of booking.
- Web Backend (Admin) will be able to manage Users (Riders and Driver), points(earn when offer a ride and spend when take a ride), view payment, and rides.
- APIs to make bridge between mobile application and backend.
- Laravel framework used to manage realtime location of driver and rider.

3rd Party Components

- Google APIs

Functionality

- Application is restricted and only can access after login.
- Admin
- Admin have a feature to approve the user registration. Users only can access the application after approval from admin.
 - Admin has a feature to expand the ride service in another city. Also can manage the points along with multiple criteria.

- Admin can setup points that you earned when you offer a ride to someone.
- Admin can manage all master data of application.
- Admin can manage lift taker, lift giver, and points transactions.

Other Technologies used

- Android (Java)
